**WELL INVESTIGATION PROGRAM—SITE ASSESSMENT ACTIVITIES AT 1200 S.
VICTORY BLVD., BURBANK, CA. (FILE NO. 110.0622)**

Reference is made to your consultant's, The Reynolds Group, letter dated September 13, 1995, transmitting a work plan for a subsurface soil gas investigation to be conducted at the subject site. We have reviewed the report and have no objections to its implementation provided that all work is completed as specified in the proposal and complies with the following site specific modifications:

1. Your consultant proposes to collect five vapor samples from three locations within the facility at the subject site. We have no objections to the locations of these preliminary sampling points, however, in order to provide a background measurement, an additional soil gas sampling point must be selected and a sample collected for laboratory analysis five feet below the ground surface. Furthermore, if VOC concentrations are detected in any of the soil gas samples, then additional samples must be taken using a 20 foot grid pattern.
2. For each soil gas sampling point, if the soil gas results obtained on-site detect elevated VOC concentrations, deeper soil gas samples should be taken, in 10-foot increments, to a maximum of 25 feet.
3. The final location of the soil gas sampling points must be verified in the field, by Board staff, on or before the day that work commences.
4. The soil gas mobile laboratory must make available upon request by Regional Board staff during any site inspection, hard copies of any initial or continued calibration data or other QA/QC data required for testing to support data generated.

Ms. Phillips

Three copies of the technical report containing the results of the subsurface soil gas investigation are due to this Regional Board by ~~October 27~~, 1995.

Please notify Board staff at least 72 hours in advance before commencing any field activities, so that we may schedule a representative to be present.

If you have any questions, please contact Ms. Ana Veloz at (213) 266-7590.
